

IMPROVED staff communication, CENTRALISED information

INTRANET

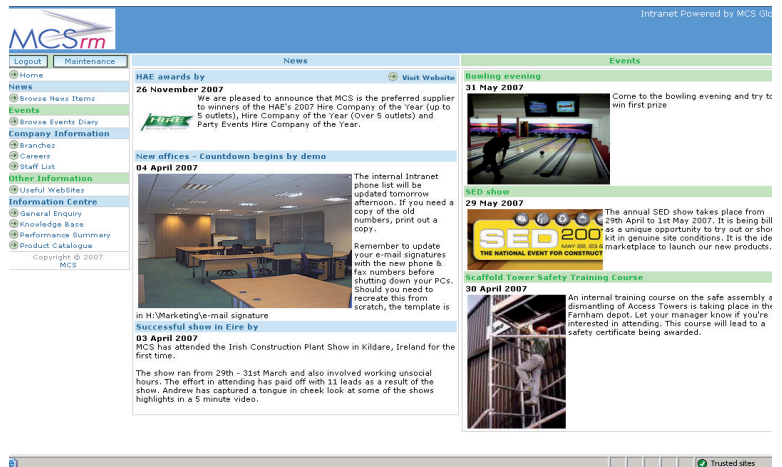

MCS' Intranet module has far reaching capabilities for any hire organisation. Features such as internal news, telephone and subsidiary office details, company activities and new product information provide just the start.

Features & Benefits

- **Available to every employee** – improves internal communication
- **Web browser screen functionality** – saves money on training and full operational licences
- **Diary, News, Links, Vacancies**
- **Knowledge base**
- **Information Centre**
 - Enquiry to MCS-rm database
 - Product Catalogue
 - EIS/Reporting

The module enables non-operational staff to directly access the MCS application using standard web browser screens – empowering them and saving you time and money on training.

INTRANET

The wealth of company information available to staff includes: full company product catalogue, company accumulated knowledge, customer details, contacts, invoices, historical information, revenue etc.

In addition to accessing and searching, staff can also produce standard and graphical reports with ease – all within the web browser screens.

As with the main MCS software hire application, all screens, images and structure of company data are entirely configurable. Preferences can also be set by groups of users to hide screens, fields or functionality wherever required, to give you complete control over data.

To find out more about how an intranet can assist your hire business, contact MCS at one of the offices below.
